

# Is Your Cannabis Manufacturing Process and Laboratory Pretty Clean?

## Alconox Inc. Can Make Them Critically Clean.

**DETONOX**® Ultimate Precision Cleaner and **KEYLAJET**® Low-Foaming High Alkaline Liquid are the perfect solutions for your toughest resin, waxy, oily and sticky residues. Ask us more!

## Make Your Cannabis Manufacturing Process and Laboratory Critically Clean

For over 75 years, Alconox Inc. has been the recognized leader in laboratory detergents, used extensively in the pharmaceutical, biotech, medical device, healthcare, electronics, solar, food, nuclear, optics and the cosmetics industries. Assisting the cannabis and related sectors with the complete removal of unwanted residues from glassware, processing equipment and instruments, is not just a natural progression. It is our pleasure.

Whether it is cleaning...

- Fertilizer lines for growers and dispensaries
- Resin and oil residues from glassware, distillers, and rotovaps at the laboratory level
- Process equipment and tanks at the vape, edible and oil manufacturing level

...we can help.

**DETONOX® Ultimate Precision Cleaner** is our flagship cannabis detergent, our most potent manual detergent and ideal for hand and ultrasonic use on difficult botanical residues. It is a non-caustic detergent for exceptional removal of cannabis, botanical, residues and sticky extracts, resins, creams and lotions.

**KEYLAJET® Low-foaming Chelating High Alkaline Liquid** is ideal for CIP and washer cleaning where the washer has a liquid dosing system to remove tough, sticky, waxy botanical residues, resins, and other highly adherent organic and oily soils.

And of course, much more. It is also ideal for vape cartridge manufacturing (e-cigarettes, vaporizers, etc.) residues that can be tough to remove and make cleaning vape manufacturing equipment, tanks and laboratory glassware a challenge.

Our technical support group is available anytime for onsite visits and teleconferences with qualified buyers.

### Before:

Sticky waxes and resins, dirt, bacteria, reagents, reaction products and residues can adhere to glassware.

### After:

DETONOX® and KEYLAJET® get cannabis and related botanical soils out, leaving no interfering residue. Surfaces stay clear, clean and pure.
